The SSV Series Drum Motor is constructed of 316-stainless steel and designed for hygienic belt conveyor applications where food safety is paramount. The drum motor is a one-component belt drive with all components enclosed inside the drive roller, protected from outside elements. With no external components such as motor, gearbox, and bearings, the drum motor improves hygiene and workforce safety and eliminates routine maintenance cycles, reducing downtime and expenses associated with traditional conveyor belt drives.

For modular, wire mesh, and monolithic thermoplastic conveyor belts, the SSV Drum Motor drives the belt without the use of sprockets. The belt profile is machined directly onto the drive drum or directly onto an exchangeable drive sleeve. SSV Series Drum Motors eliminate gaps and crevices, reducing water and time used for washdown by 50%.

All components of the drum motor are designed for 80,000 hours of continuous operation with no required maintenance. The 96% mechanically efficient gear reducer is in-line with the electric motor, increasing energy efficiency by 25% to 30%, resulting in lower energy consumption and costs. The SSV Series Drum Motor is a hygienic, space-saving, less complex, efficient, reliable, and maintenance-free solution to power belt conveyors. Available in a wide range of diameters, belt speeds, horsepower, face widths, and options to suit all types of belt conveyor applications.

[View Video](#)

INCREASE HYGIENE

All enclosed 316-stainless steel SSV Drum Motors feature an IP69K-rated sealing system, withstand pressure washdown up to 3,000 psi, and drive modular conveyor belts without the use of sprockets.

REDUCE ENERGY CONSUMPTION

With 96% mechanical efficiency and a premium-efficiency electric motor, SSV Drum Motors reduces energy consumption, resulting in energy savings of 25% to 30% over traditional external conveyor drives.

ELIMINATE MAINTENANCE CYCLES

Maintenance-free SSV Drum Motors are designed for 80,000 hours of continuous operation before an oil change that is performed without removing the drive. With no external drive components, the drum motor eliminates the constant need for lubricating bearings, chain adjustment, and routine maintenance cycles.

INCREASE WORKFORCE SAFETY

With all components enclosed inside the drive roller, the SSV Drum Motor eliminates the external components of a traditional conveyor drive that could pose hazards to workforce safety.

ENHANCE SPACE UTILIZATION

Low-profile SSV Drum Motors reduce the overall footprint of the conveyor (area the conveyor occupies), allowing more conveyors to fit on the same floor or overhead space.

STANDARD FEATURES:

PREMIUM-EFFICIENCY ELECTRIC MOTORS

All electric motors are manufactured in-house by VDG to Class H insulation standards, are inverter-duty, and can be supplied for all standard and non-standard voltage at 50 Hz or 60 Hz for 3 phase applications. All VDG electric motors undergo a **Vacuum Pressure Impregnation (VPI)** process, increasing the life of the electric motor.

PRESSURE EQUALIZATION SYSTEM (PES)

Depending on the application, the heat generated by the electric motor and gear reducer during normal operation will raise the internal pressure up to 18 psi. The internal pressure will cause tighter than normal engagement of the oil seals to the shaft, resulting in premature oil seal failure. The increased internal pressure will result in oil leakage and a higher operating temperature. The pressure equalization system (PES) releases the internal pressure above 0.5 psi. Lower internal pressure eliminates oil leaks, reduces the operating temperature, and increases the electric motor and gear reducer performance.

IP69K SEALING SYSTEM

Withstands pressure washdown up to 3,000 psi

OPTIONS:

NON-STANDARD LENGTH / EXTRA LONG FACE WIDTH - Contact your VDG technical representative for details.

MECHANICAL BACKSTOP (TB)

To prevent rollback for incline conveyors, the backstop device in the drum motor allows the drum motor to rotate only in one direction.

ELECTROMAGNETIC BRAKE (RTM)

The mechanical electromagnetic brake inside the drum motor allows the drum motor to start and stop 45 times per minute. Available for TM127 and higher.

OVERLOAD PROTECTION (GV-THERM)

The GV-THERM, a thermal bimetal device embedded into the motor windings that reacts to temperature, provides an additional layer of thermal overload protection.

LAGGING

VDG offers a complete line of USDA approved white or blue nitrile rubber lagging.

BELT PROFILES

Belt profiles are available either machined directly onto the drive drum (SSV Drum Motor) or machined onto an exchangeable drive sleeve (SSV-XP Drum Motor).

SSV Series Drum Motors drive modular, wire mesh, and monolithic conveyor belts without the use of sprockets.

SSV Drum Motor with Continuous Profiled Drum

Profile is machined directly onto the drive drum.

SSV-XP Drum Motor with Exchangeable Profiled Sleeve

Belt profile is machined directly onto an exchangeable drive sleeve (XP) which is easily removed & exchanged for another profiled sleeve to match the belt required on the conveyor without changing the drum motor. The VDG patented profiled sleeve is available for TM127 and TM160 only.

VDG (Van der Graaf) has provided conveyor drive solutions to the material handling and processing industries for over half a century. VDG continues as the leader in the design and manufacturing of drum motors by consistently investing in research and development and utilizing cutting-edge production technology and automation. With in-house precision manufacturing, VDG ensures product quality, fast delivery, and superior customer support.

VDG adheres to high quality standards and a simple principle: design a superior product to meet customer needs in a changing marketplace.
